INSPECTION REPORT

(Continuation sheet)

Page 2 of 2

PERMIT NUMBER: ACT/041/002

DATE OF INSPECTION: 3/13/2000

(Comments are Numbered to Correspond with Topics Listed Above)

4B HYDROLOGIC BALANCE: SEDIMENT PONDS AND IMPOUNDMENTS

The sediment pond and its associated decant pond located at the roadside waste rock site were inspected this day. Inslopes of the sediment pond remain snow covered; the bottom of the pond contains ice. There were no hazards noted this day.

The mine site sediment pond was inspected this day, as well. Much of the snow at the mine site has melted, hence the water level in this pond is up. The areas of the mine yard which are unpaved are very muddy, indicative of a very recent melt. There were no unusual conditions noted with the mine site sediment pond this day.

20. AIR QUALITY PERMIT

A front end loader was observed picking up water from the sediment trap in the yard area and then dispersing it over the pavement in the truck loading area of the Mine yard. This helps in the suppression of fugitive coal fines.

Note: This inspection report does not constitute an affidavit of compliance with the regulatory program of the Division of Oil, Gas, and Mining.

Copy of this Report:

Mailed to: Mike Davis (Canyon Fuel)

Given to: Pam Grubaugh-Littig (DOGM)

Date: March 14, 2000

Inspector's Signature: #46
